

Configuring VPN for Mac OS X

8/29/2011

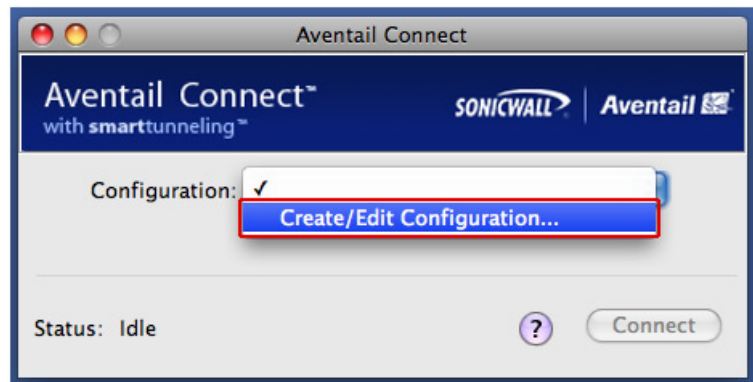

Below are instructions for configuring a Mac OS X for Virtual Private Network access.

To configure VPN for Mac OS X:

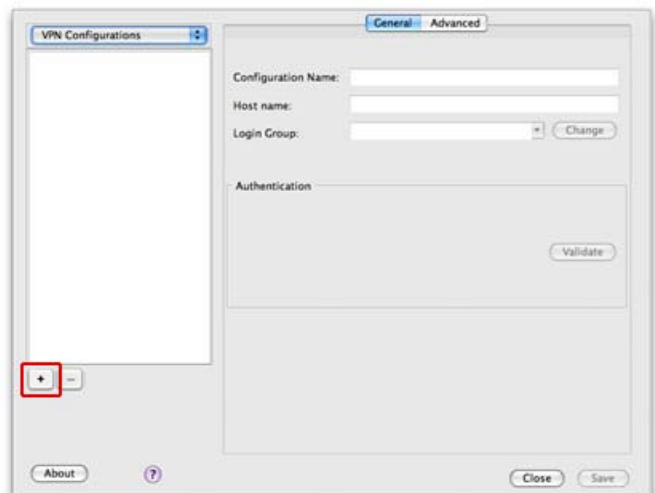

1. Visit <https://access.hws.edu/> to download and install the VPN client

2. Launch the **VPN client** and open the **configuration menu**

3. Add a new configuration by clicking the **[+] button**

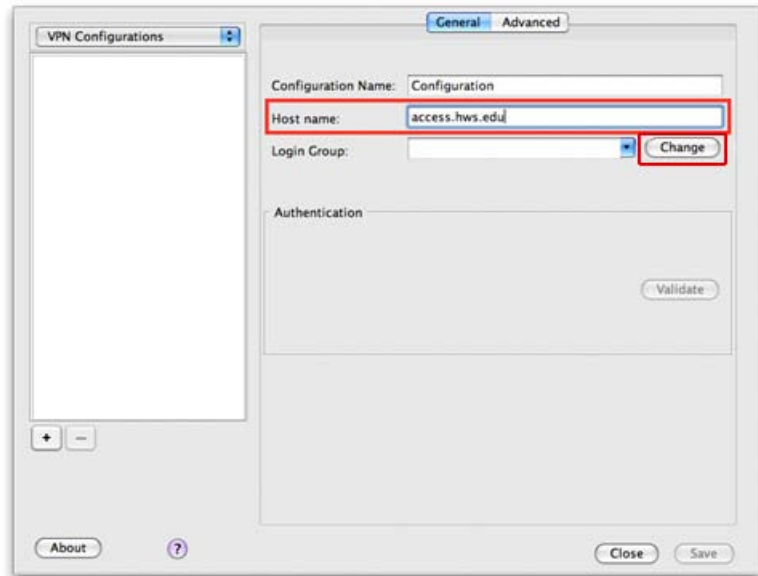

Configuring VPN for Mac OS X

8/29/2011

4. In the Host Name field, enter **access.hws.edu**

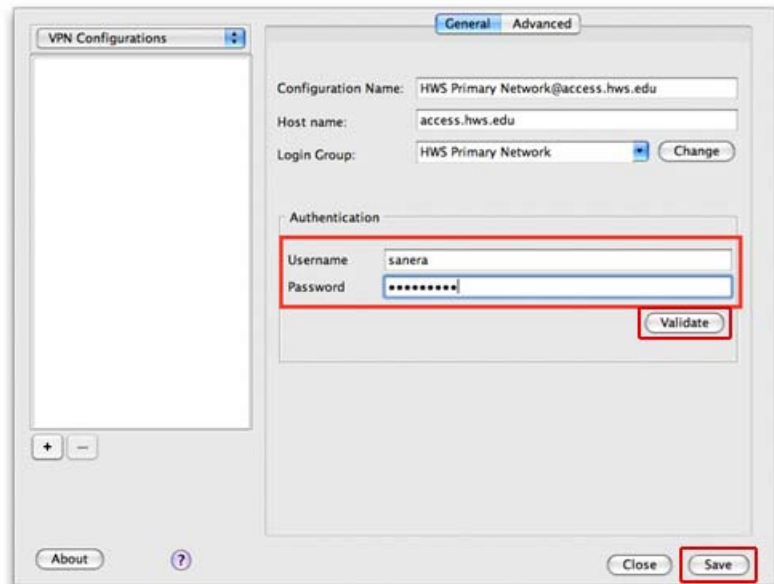

5. Click **Change**

6. In the Authentication fields, enter your **username and password**

7. Click **Validate**

8. Click **Save**

You should see a "successful authentication" message. Click **OK** on the message.

9. From the main menu, select the **new configuration** and **log in**

These configuration steps will only need to be followed once. After this, you will only need to enter your username and password when you launch the VPN client.
